ACKNOWLEDGEMENTS

The Bureau of Economic and Behavioral Research would like to express its appreciation to the 134,415 dentists who so cooperatively responded to this survey, thus making this publication possible.

The Bureau also would like to thank the constituent and component dental societies, dental school alumni offices, specialty and state boards of dental examiners, dental specialty associations throughout the nation, and officers of the Association for their advice and material assistance.

In addition, the Bureau of Data Processing and Membership Records provided a number of services necessary for compiling information contained in this publication.

INTRODUCTION

A. Background

Due to the rising interest in health care, planners, legislators, dental organizations, and individual practitioners have an increasing need for accurate information concerning the number and locations of dentists currently residing in the United States. Part of this increased need is a result of Public Law 94-484, passed in 1976, which directs the assignment of National Health Service Corps dentists and which requires a rational, consistent definition of "shortage areas." This in turn necessitates having accurate dental manpower supply and distribution information. Dental organizations are also frequently involved in making recommendations which affect the dental field and must have current, reliable information upon which to base their decisions. Furthermore, individual practitioners may use distribution data in selecting practice locations, as population and manpower statistics can help identify areas needing dental services and offering good opportunities for professional development.

In an effort to provide such data to organizations and individuals, the Bureau of Economic and Behavioral Research of the American Dental Association conducts a survey every three years to update the master list of all dentists residing in the United States or its possessions. The list includes members and non-members of the Association; practicing and non-practicing dentists; and licensed and unlicensed graduates of accredited dental schools. Graduates of United States dental schools now residing in foreign countries and graduates of foreign dental schools now licensed in the United States are also included.

In order to locate non-members and to differentiate between dentists' residence and practice addresses (information necessary for a thorough descriptive analysis of manpower distribution), the Association has taken measures to improve both its data-collecting and record-keeping methods. This has resulted in a very comprehensive list of dentists, with a low percentage of unlocated dentists. The complete methodology utilized is described in Section B.

The *Distribution of Dentists 1979* was prepared by grouping the dentists who responded to the postcard questionnaire into counties. These groups were then matched with population and economic information obtained from the *Sales Management's Survey of Buying Power*, conducted yearly and published by *Sales Management*.

The tables contained in this report are intended to serve as guides for comparing regions, states, districts, and counties with respect to their population, economic characteristics, and total number of dentists by professional activity and specialty. These differentiations provide a more critical assessment of supply based on various types of measurement.

While this publication contains accurate information concerning dental manpower distribution, the master file upon which it is based is continually updated. Therefore, the Association has access to more current data as it becomes available. In addition, planners should supplement this information with data gathered at the local level. Produc-

tivity of dentists and various socioeconomic characteristics of their communities, counties, or states all contribute to the effective utilization of dental services, and therefore are important considerations when formulating policy.

B. Research Design

The American Dental Association maintains a comprehensive registry of dentists, including all graduates of accredited United States dental schools regardless of their Association membership status. Each dentist is categorized by practice type (general or specialty) and occupation (full-or part-time practitioner; dental school faculty or staff member; federal, state, or hospital dentist; intern, resident, or student; administrator; or retired dentist). Foreign graduates who have been licensed in the United States and have applied for an American Dental Association identification number are also included. Known deaths and address changes are placed on the file twice a month and are current for this publication as of March 29, 1979.

1. *Data Collection*
   a. In April 1978, the Bureau of Economic and Behavioral Research of the American Dental Association sent a postcard questionnaire to the 138,278 dentists listed in the 1978 registry who had graduated prior to January 1, 1978 and who were living in the United States or its possessions.
   b. In June, postcard questionnaires stamped "second mailing" were sent to the 34,540 dentists who had not yet responded.
   c. During July, follow-up (third) questionnaires were sent to dentists in Puerto Rico, Hawaii, Alaska, Guam, and the Canal Zone as well as to all military dentists stationed overseas who had not yet returned the survey.
   d. From July to August, the Bureau attempted to contact and interview by telephone the 15,649 unlocated dentists living in the continental United States.
   e. From July 1978 to February 1979, several attempts were made to reach approximately 6,000 unlocated dentists. The Bureau contacted dental school alumni offices, individual state boards of dental examiners, specialty boards of examiners, national specialty associations, officers of constituent dental societies, and the chiefs of the Public Health Service, Army, Navy, and other Federal Dental Services asking for assistance in identifying the status and/or locations of those dentists who had not responded to the survey. From January through March 1979, a postcard questionnaire was sent to each new or corrected address received.
   f. Remailing of questionnaires to new addresses of dentists obtained from dental schools, boards of dental examiners, and dental school alumni offices is still being carried out. Since the deadline for this publication was March 29, 1979, however, any location information received after that date is not included in this booklet but will be added to the master file. Mailing of the same postcard questionnaire is scheduled to be sent to all 1978 dental graduates in the summer of 1979. Similar follow-up procedures will ensure that the Bureau obtains accurate status and location information on these new dentists.

2. *Response Rate*

The response rate after the first mailing was approximately 75%. The second mailing, telephone follow-up, and assistance from other organizations resulted in a final adjusted response rate of 97.2%, thus leaving 5,961 dentists whose locations or vital status are not known. Deceased dentists are removed from the file as the Association learns of their deaths from obituaries, constituent societies, families, or state departments of vital statistics.

3. *Unlocated Dentists*

Many of the dentists who did not respond to the initial two mailings of the postcard and dentists whose questionnaires were returned as unclaimed "addresses unknown" were either interviewed on the telephone, mailed another questionnaire at a new address, or had their vital status verified by the dental societies. On March 29, 1979, most of the remaining unlocated dentists consisted of Association non-members whose current addresses are not maintained by state or national dental organizations or by dental boards. At this time, non-respondent dentists who graduated from dental school prior to 1930 were defined as "inactive." Others were classified as "unlocated."

For the purpose of this study, unlocated dentists are considered alive and living somewhere other than at their last known addresses. For comparison, national ratios are presented both with and without these dentists. They are not included in any region, state, or county totals.

C. Definitions

1. *General Terms*

a. *Regions and districts within states:* Each region consists of the districts listed under it and each district consists of the counties listed under it. As defined by the United States Public Health Service and published in Public Health Bulletin No. 305 ("Health Service Areas: Estimates of Future Physician Requirements"), the United States is divided into 761 districts and 111 regions.

b. *Population, 1978*:* Projected from the United States Census Bureau's 1970 *Census of Population and Housing*, "population" is the estimate of all people living in an area at the end of 1978, including those in colleges, hospitals, and the armed forces permanently assigned to the area, but excluding tourists and transients.

c. *Urban population, 1978*:* This includes all persons living in: 1) incorporated municipalities of 1,000 or more persons with a density of 1,800 persons per square mile; 2) unincorporated places of 1,000 or more persons with a density of 1,800 persons per square mile; or 3) the urbanized fringe of 1) or 2) if it has at least 1,000 persons and a density of 1,000 persons per square mile.

d. *Percent population increase, 1960 to 1970:* The percent population increase was calculated from decennial census figures published by the Bureau of the Census. It is included to give information concerning the growth or decline of areas during the 1960's.

e. *Number of households, 1978*:* All people occupying a single housing unit (house, apartment, or room) comprise a household. The members may or may not be related. A single person living alone is counted as one household.

f. *Per capita effective buying income, 1978*:* This is the quotient obtained by dividing an area's total effective buying income by the number of people in the area. This figure can become distorted by significant population changes during the year.

g. *Per household effective buying income, 1978*:* This is the quotient obtained by dividing an area's total effective buying income by the number of households in that area.

**Sales Management's Survey of Buying Power, 1978.*

h. *Per capita retail sales, 1978*:* This is the quotient obtained by dividing an area's net sales of establishments primarily engaged in retail sales – including sales tax, repairs, and services but excluding returns and retail sales by non-retailers – by the population of that area. Frequently, this figure is used as a rough gauge of purchasing power of residents in an area.

i. *Median household effective buying income, 1978*:* The median is the score which divides a distribution exactly in half. Thus, if all the household effective buying incomes in an area were ranked in order of size, the median household effective buying income would be the midpoint; 50% of incomes would lie above it and 50% would lie below it.

2. *Dental Terms*

a. *Unlocated dentists:* Dentists who did not respond to this survey, and dentists whose questionnaires were returned as unclaimed "addresses unknown" are classified as "unlocated." This category includes all dentists believed to be alive and residing in the United States from whom the Bureau received no response, but does not include those non-respondent dentists who graduated from dental school prior to 1930.

b. *Specialists:* Specialists are included in all counts and ratios for any particular geographic area. Specialists are defined by the Association as: 1) dentists who have completed two or more years of advanced education at an accredited dental program in this specialty area; 2) diplomates of the eight American boards; or 3) dentists who possess licenses that permit announcement issued by state boards of dental examiners. In all cases, the Association must receive formal notification of a dentist's eligibility either from the accredited program or from the individual dentist.

c. *Number of 1978 graduates:* Many 1978 graduates are still listed according to their dental school mailing addresses, which have been found to be unreliable predictors of practice location. Therefore, the 1978 graduates are not included in the "total number of professionally active dentists, 1978," but are shown separately.

d. *Women dentists:* Female dentists are included in all counts and ratios for all geographic areas. Separate figures are provided in the appendices for those interested in information on the specific number of women practicing dentistry by location, current occupation, and specialty. Sex was self-reported by those who responded to the *Distribution of Dentists 1979* questionnaire, and determined by name for those who did not.

e. *Foreign dentists:* 618 dentists on file with the Association are listed with foreign addresses (excluding overseas military personnel or those residing in United States territories). While they are graduates of American dental schools, their potential as manpower for the United States is considered minimal, since most have established practices in other countries. Therefore, they are not included in the *Distribution of Dentists 1979* counts.

f. *Inactive dentists:* Dentists who reported that they are retired or no longer involved in the practice of dentistry, and unlocated dentists who graduated from dental school prior to 1930 are classified as "inactive."

g. *Total number of professionally active dentists, 1979:* The number of professionally active dentists given for any county, district, region, or state is the total number of dentists, excluding those who are retired, are no longer practicing, or whose locations are unknown. The counts are as of early 1979, but exclude 1978 graduates. The total includes clinical practitioners, dental school faculty or staff, dentists in the Armed Forces or public health field, members of hospital and health organization staffs, graduate students, and those involved in residency programs.

**Sales Management Surrey of Buying Power, 1978.*

h. *Population per active practitioner, 1979:* This is the quotient obtained by dividing the "estimated population" by the number of dentists who indicate that their primary or secondary** occupation is the clinical practice of dentistry (delivery of care to patients).

i. *Population per full-time practitioner, 1979:* This is the quotient obtained by dividing the "estimated population" by the number of dentist who indicate that their primary or secondary occupation is the clinical practice of dentistry (delivery of care) more than 30 hours per week.

j. *Population per professionally active dentist, 1979:* This is the quotient obtained by dividing the "estimated population" by the "total number of professionally active dentists, 1979." The 1979 national ratio of total population to total professionally active dentists is approximately 1830 to one.

**Each dentist could indicate two occupations, thus providing a more complete picture of the dental delivery system. For example, one dentist could specify "faculty member" as well as "part-time practitioner."
